

## Enabling the Mobile Work Force

BY SAL RICCIARDI

Expertcity's **GoToMyPC Corporate 4.0** scores high marks for its easy and innovative approach to remote PC management. The product communicates across firewalls without requiring changes to them and automatically learns your IP address (even when it's dynamically assigned by your ISP). The viewer software downloads automatically, works simply, and provides secure and capable remote access.

The latest release adds to GoToMyPC's security repertoire by letting you generate a series of one-time passwords to create an additional layer of user authentication. Version 4.0 also lets you view all log-on attempts so you can scrutinize any that look suspicious.

The new viewer has some welcome improvements. For example, the new Screen Area Auto-Matching feature automatically reduces the host's resolution to that of the remote machine.

GoToMyPC PocketView gives you full remote access from wireless Pocket PC 2002/2003 devices or smart phones.

GoToMyPC features are determined by your service level. Previously only Personal and Cor-

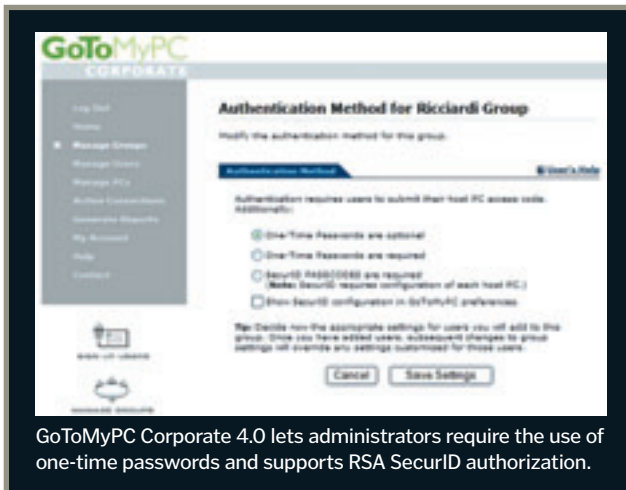

porate versions were available. Version 4.0 adds GoToMyPC Pro, with support for multiple users and basic administration features targeted at small businesses.

There's also GoToMyPC Corporate Plus, with security and administration enhancements targeted at corporate customers. Chief among these is support for RSA SecurID two-factor authorization so that GoToMyPC can be integrated with the existing security infrastructure.

GoToMyPC is the product to buy if you want to minimize the setup and support burden and provide an accommodating yet full-featured solution to a wide variety of end users.

GoToMyPC Corporate 4.0

For ten PCs (annual plan), \$227 a month. Expertcity Inc., 888-259-3826, [www.expertcity.com](http://www.expertcity.com).

GoToMyPC Corporate 4.0 lets administrators require the use of one-time passwords and supports RSA SecurID authorization.
