

Optimal Firewall Configuration

Covers GoToAssist, GoToMeeting, GoToWebinar, GoToMyPC, GoToManage and future product deployments involving our servers as of February 2012.

1. Citrix Online products are configured to work outbound through TCP ports 8200, or 80 or 443. In a restricted environment port TCP 8200 can be set up for outbound connections. Our products do not listen for, nor do they require, any inbound connections. Connections outbound via TCP port 8200 are optimal, although connections through ports 80 and 443 can also be used.
2. Integrated Voice over IP connections are configured to work outbound through UDP port 8200. Integrated Webcam Video support is configured through UDP port 1853
3. If your firewall includes a content or application data scanning filter, this may cause blocking or latency, which would be indicated in the log files for the filter. To address this problem, verify the below IP ranges will not be scanned or filtered by content or application data scanning filters by specifying exception IP ranges that will not be filtered.
4. If your security policy requires you to specify explicit IP ranges, then configure your firewall to limit TCP port 8200 or 80 or 443 destination, UDP ports 8200 and 1853 and IP addresses to only the Citrix Online ranges listed below.

Important Note: Steps 3 and 4 are discouraged unless absolutely necessary because such IP ranges need to be periodically audited and modified, creating additional maintenance to your network. These changes are rare, but they may be necessary to continue to provide the maximum performance for the Citrix Online family of applications. Maintenance and failover events may cause you to connect to servers within any of the ranges.
